Clone requests: clonerequest@sanger.ac.uk

Cn Peb 14, 1998 this sequence version replaced gi:2465060.

The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases:

Em:, EMBL; Sw:, SWISSPROT; Tr:, TERMBL; Wp:, WORMPEP; Information on the WORMPEP database can be found at http://www.sanger.ac.uk/Projects/C\_elegans/wormpep This sequence was generated from part of bacterial clone contigs of human chromosome 1, constructed by the Sanger Centre Chromosome 1 Mapping Group. Further information can be found at http://www.sanger.ac.uk/HGP/Chr1

RP3-4366 is from the library RPCI-3 constructed by the group of Pieter de Jong. For further details see http://www.chori.org/bacpac/home.htm Center code: SC

It currently consists of 28 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                         as soon as it is available and the accession number will be preserved.

PS Claim 1; SEQ ID NO 1228; Opp; Engli Recombinant nucleic acid useful for diagnosis and treatment of carcinoma comprises a nucleotide sequence.

Claim 1; SEQ ID NO 1228; Opp; English.

```
The present invention relates to novel DNA and protein sequences which care associated with carcinomas. The sequences are useful for: (i) for Screening drug candidates; (ii) for screening of bioactive agent capable of binding to Carcinoma Associated Protein (CAP); (iii) for screening of a bioactive agent capable of modulating the activity of CAP; (iv) for carcinoma; (vi) for inhibiting the activity of CAP; (iv) for diagnosing carcinoma; (vii) for neutralizing the effect of CAP; (vii) for treating carcinoma; (viii) for neutralizing the effect of CAP; (ix) as a biochip; (x) for diagnosing carcinoma or a propensity to carcinoma; and (xi) for capable of CAP; (viii) for diagnosing carcinoma or a propensity to carcinoma; (viii) for diagnosing carcinoma or a propensity to carcinoma; (viii) for capable of CAP; (viii) for diagnosing carcinoma or a propensity to carcinoma; (viii) for capable of CAP; (viii) for diagnosing carcinoma. The present sequence is one such CAP; (viii) for carcinoma including lymphoma. The present sequence is one such CAP; (viii) for carcinoma including lymphoma. The present sequence is one such CAP; (viii) for carcinoma; (viiii) for sequence is an equivalent to basic patent capable of US2002182586A1, for which no sequence data was published
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Query Match

ULT 3 51368 AAV51368 standard; DNA; 6169 BP.

AAV51368;

27-OCT-1998 (first entry)

Human TIGR upstream region and exon 1 DNA.

Κ¥ TIGR; trabecular meshwork induced glucocorticoid response protein; human; diagnosis; glaucoma; polymorphism; steroid sensitivity; ss.

                                                                                                                                                                                                                                                                                                                   This sequence is a trabecular meshwork induced glucocorticoid response protein (TIGR) upstream region and exon 1. This DNA sequence can be used in a method for diagnosing glaucoma in a patient. The method involves the detection of polymorphisms whose presence is predictive of a mutation affecting TIGR response in the patient and can be diagnostic of glaucoma or steroid sensitivity. Base substitutions and base additions upstream of and within TIGR exons can also be used to diagnose glaucoma
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  SgS

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                glucocorticoid receptor) promoter. The specification describes a method for the diagnosis, prognosis and treatment of glaucoma, based on detecting specific polymorphisms in the promoter of the TIGR gene. The method is used for diagnosis and prognosis of glaucoma (of all types), steroid sensitivity and progressive ocular hypertension that leads to loss of vision. Glaucoma can be treated by administering an agent that binds to cis-acting elements within the TIGR promoter. The TIGR promoter cor other regulatory regions) can be used to express homologous or heterologous genes, particularly for tissue-specific expression of therapeutic transgens for treating glaucoma, also to generate transgenic diagnostic or therapeutic potential. Fragments of the TIGR sequence can be used as amplification primers or probes, e.g. for isolating related sequences in non-human animals

The present sequence represents a TIGR (trabecular meshwork inducible CC glaucocorticoid receptor) promoter, isolated from an individual without CC glaucoma. The specification describes a method for the diagnosis, CC prognosis and treatment of glaucoma, based on detecting specific prognosis and prognosis of glaucoma (of all types), steroid sensitivity CC diagnosis and prognosis of glaucoma (of all types), steroid sensitivity CC and progressive ocular hypertension that leads to loss of vision. CC diagnosis within the TIGR promoter. The TIGR promoter (or other regulatory regions) can be used to express homologous or heterologous CC genes, particularly for tissue-specific expression of therapeutic corresponds for treating glaucoma, also to generate transgenic animals and CC in screening for compounds (specific modulators) with diagnostic or therapeutic potential. Fragments of the TIGR sequence can be used as amplification primers or probes, e.g. for isolating related sequences in non-human animals
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Diagnosis, prognosis and treatment of glaucoma, based on detecting specific polymorphisms in the promoter of the trabecular meshwork inducible glucocorticoid receptor gene.

The method is useful for the treatment of a glaucomatous patient, i.e. patient having glaucoma, e.g. inherited glaucoma or primary open angle glaucoma. The method allows the identification of individuals at risk for progressive increases in intraocular pressure, which is a risk factor for glaucoma. It also allows the identification of individuals among ocular hypertensive/glaucoma suspect groups at increased risk of visual field loss. The present sequence represents the human TIGR promoter DNA.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       5
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Homo
The invention relates to a method of providing treatment to a glaucomatous patient involves (a) determining whether the patient has a mutation in the trabecular meshwork glucocorticoid response (TIGR) promoter selected from TIGRmt1, TIGRmt11, or both TIGRmt1 and TIGRmt11 and (b) administering a non-steroidal anti-inflammatory drug (NSAID) to the patient. Also included are a method of preventing increases in intraocular pressure in a patient predisposed to developing glaucoma, a
                                                                                                                                                                                                                                                                                    Treatment of glaucomatous patient involves determining whether patient has a mutation in trabecular meshwork glucocorticoid response promoter followed by administration of non-steroidal anti-inflammatory drug.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               05-NOV-2001; 2001US-00985637.

cc method for decreasing the mean diurnal intra-ocular pressure in a cc patient, a method of providing treatment to a patient known to possess at cleast one mutation in the TIGR gene selected from TIGRmt1 and TIGRmt11, ca method of selecting a patient for a clinical trial, a method of cimproving the results of a drug study involving a treatment for elevated crisk for developing elevated intraocular pressure, a method of ctesting the efficacy of a therapeutic agent at counteracting glaucoma pathogenic mechanisms The methods are used for preventing increases in cristocular pressure in a patient (i.e. a patient having asymptomatic cristocular pressure in a patient counteracting glaucoma pathogenic mechanisms The methods are used for preventing increases in creasing the mean diurnal intra-ocular pressure in a patient of cular inflammation. The method allows the identification of individuals at risk for progressive increase in intraocular pressure and the the sullows the identification of individuals among ocular counters the identification of individuals among ocular is an appearance is the identification of individuals among ocular pressure in the present sequence is the 5' region of the human figr gene.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    9999999999999999999

The method involves the detection of polymorphisms whose presence is predictive of a mutation affecting TIGR response in the patient and can be diagnostic of glaucoma or steroid sensitivity. Base substitutions and base additions upstream of and within TIGR exons can

The method involves the detection of polymorphisms whose presence is predictive of a mutation affecting TICR response in the patient and can be diagnostic of glaucoma or steroid sensitivity. Base substitutions and base additions upstream of and within TICR exons can also be used to diagnose glaucoma
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence

for diagnosis,
                                                                                                                                                                        This sequence is a trabecular meshwork induced glucocorticoid response protein (TIGR) promoter variant, TIGRSv1, which is used in a method for diagnosing glaucoma in a patient. TiGRsv1 which is used in a method for polymorphisms whose presence is predictive of a mutation affecting TIGR response in the patient and can be diagnostic of glaucoma or steroid sensitivity. Base substitutions and base additions upstream of and withing the patient and can be diagnostic.
